Introduction to Coaching

Coaching is a distinct service which focuses on an individual's life - be it professional or personal - as it relates to goal setting, outcome creation and personal change management.

Coaching is:

- a conversation that allows the client to forward the functionality, capabilities, circumstances and understanding of who they are;
- derived from a set of technologies that have been developed to maximize a person's effectiveness and fulfill her/his full potential;
- a forwarding partnership between a coach and client in a thought provoking and creative process that inspires them to triumph over their challenges, resulting in the client's evolution.

Trained coaches seek to elicit solutions and strategies from their clients themselves; they believe the client is naturally creative and resourceful.

According to a Manchester Consulting Group study of Fortune 100 Executives, coaching resulted in:

- a return on investment (ROI) of almost **6 times** the program cost;
- **77%** improvement in relationships;
- **67%** improvement in teamwork;
- **61%** improvement in job satisfaction;
- **48%** improvement in work quality.
